surface: 35 000 m², cost: 4.198.079 euros

client: city of lisbon

Escalera da segunda metade do séc. XIX

A edificação de novos estaleiros na freguesia ribeirinha da região teve início no séc. XIX, na sequência da reconstrução posterior da cidade após o terramoto de 1755. Nestes novos paredões de tal o acesso ao rio foi-se através de grandes escadarias, construídas em cantaria de calcário azulado sobre estacas de madeira. A escadaria por onde hoje se acede ao parque de estacionamento é um desses exemplos.

Staircase Second half of the 19th century

One of the consequences of the final reconstruction of the city after the 1755 earthquake is the construction of new structures on the waterfront, in the second half of the 19th century. In these new waterfront docks, large limestone staircases, laid on wooden stakes, provided the river access. The staircase by which you now access the parking garage is one of these examples.

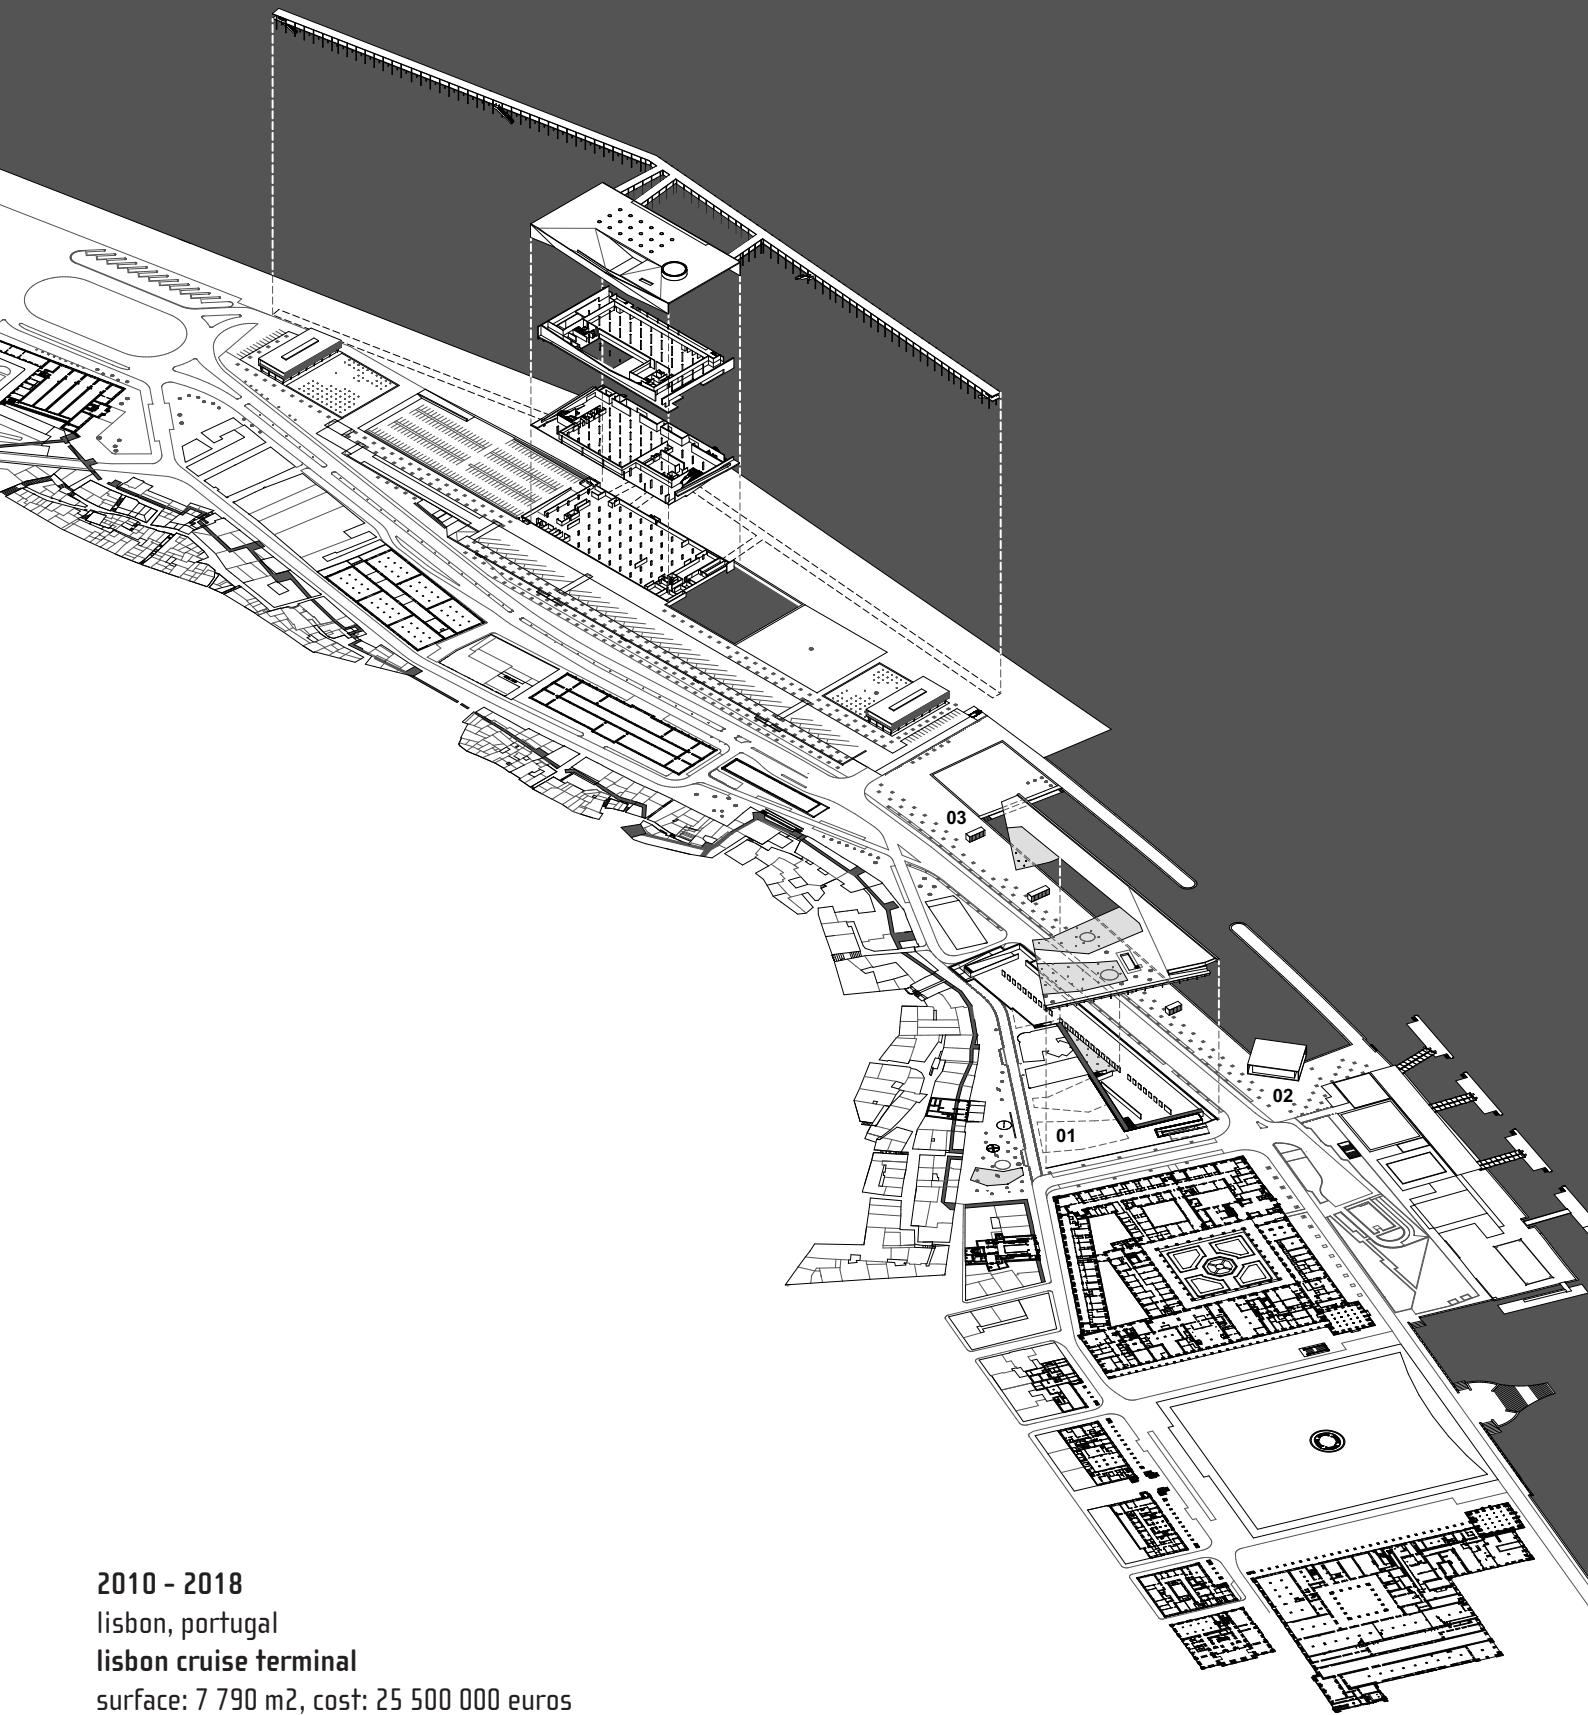

Restoration of the site in 1980-1981. The site was excavated in 1980 and the restoration work was completed in 1981. The site is now open to the public and is a popular destination for tourists.

The wall of the second hall of the site is made of large, rectangular stone blocks. The blocks are arranged in a regular pattern and are held together with a thick layer of mortar. The wall is about 2 meters high and is located in the center of the site.

2010 - 2018

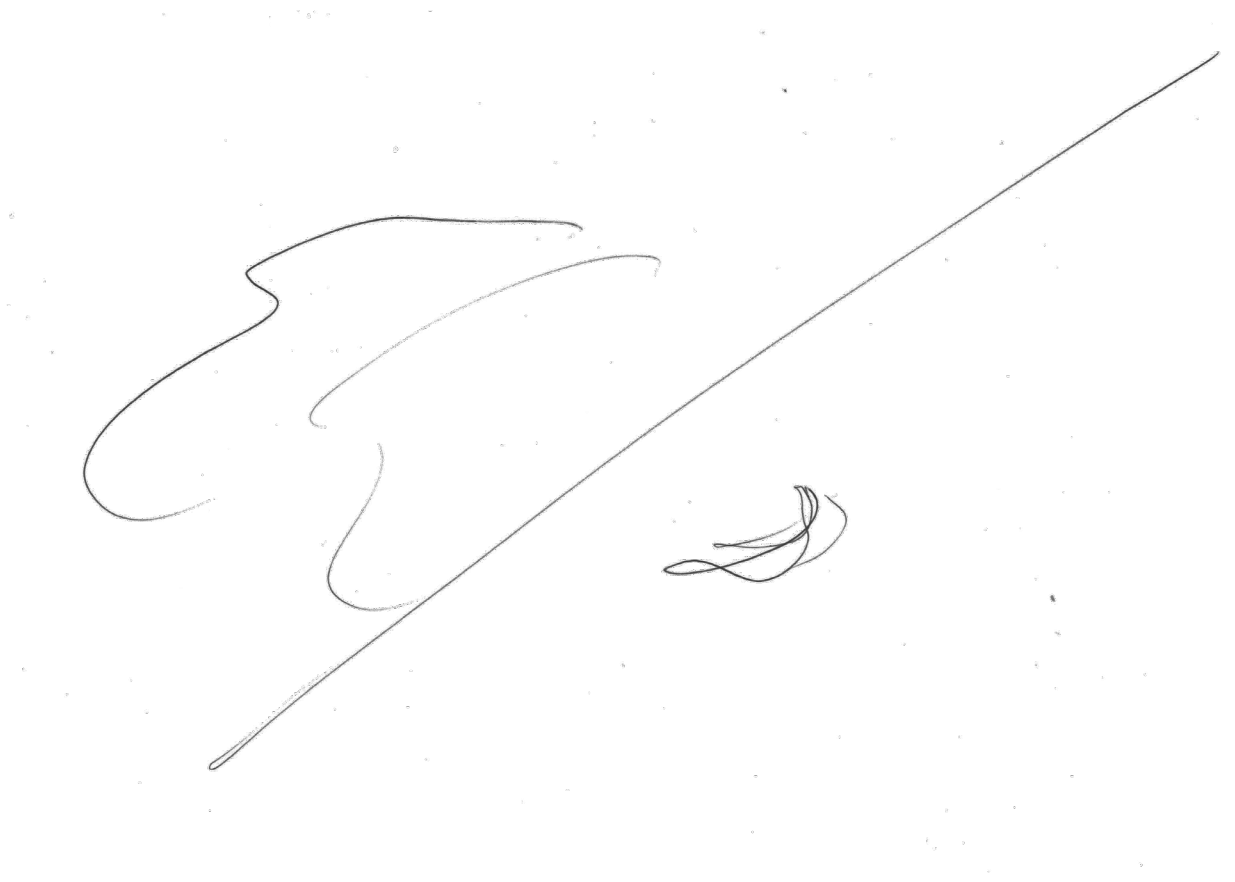

lisbon, portugal

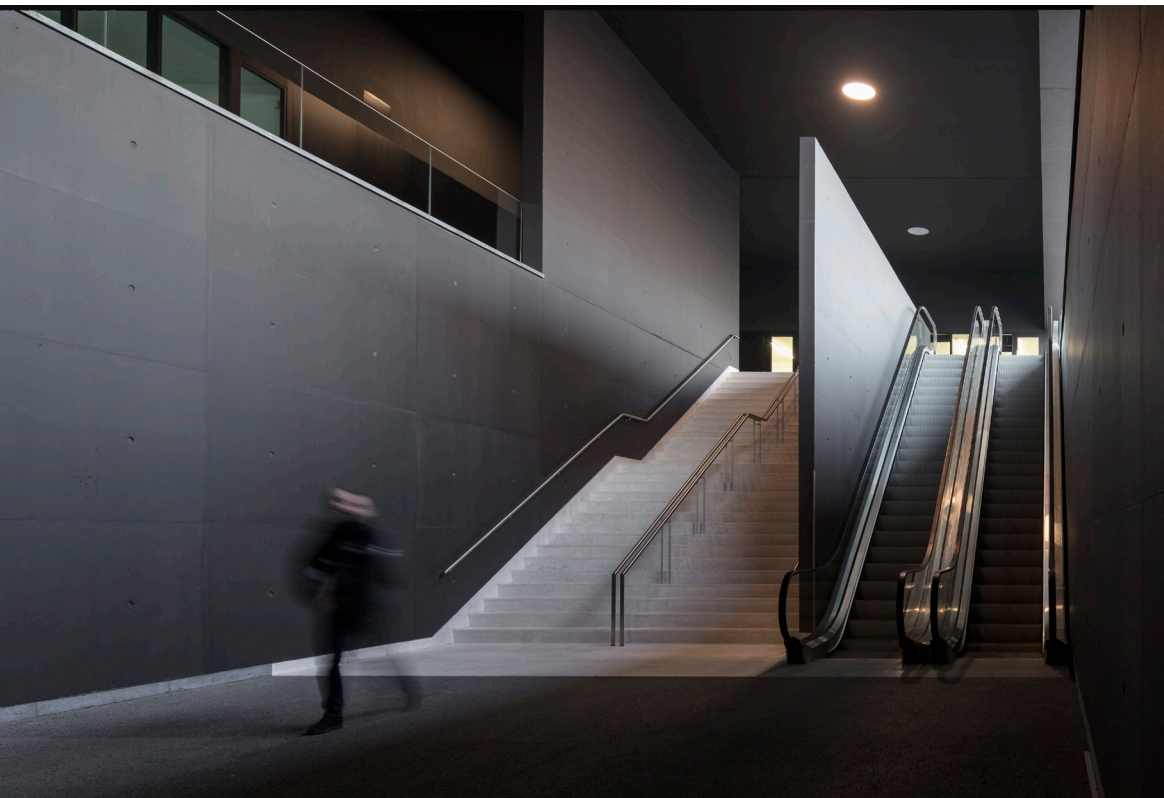

lisbon cruise terminal

surface: 7 790 m², cost: 25 500 000 euros

una nave - cilindro perfetto

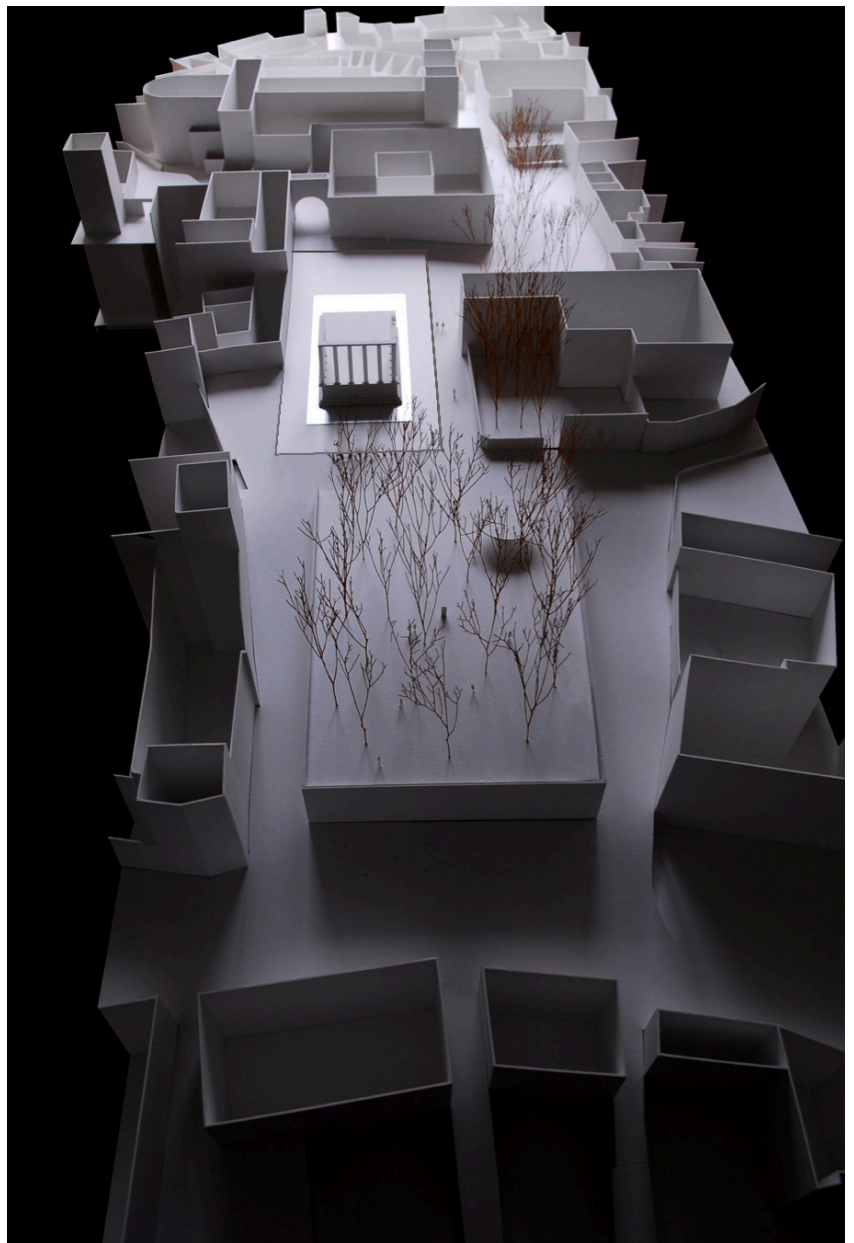

Il cilindro è la forma geometrica ideale per un contenitore di grandi dimensioni. La sua struttura è semplice e si presta a infinite varianti. In questo caso, il cilindro è stato utilizzato per creare un contenitore per la raccolta dei rifiuti. La sua forma è stata scelta per la sua eleganza e per la sua funzionalità. Il cilindro è stato realizzato in metallo e ha una superficie liscia e riflettente. La sua altezza è di 2,5 metri e il suo diametro è di 1,5 metri. Il cilindro è stato installato in un'area pedonale e serve a raccogliere i rifiuti dei passanti. La sua presenza è un elemento di design che si integra perfettamente con l'ambiente urbano.
